

OrderIT 
MOUNTAIN TOP

MountainTop OrderIT progressive web experience is set to revolutionize mobile apps where we combine the best of the web with the best of the app. No install is required which means it is useful to users from the very first visit in a browser tab. MountainTop OrderIT progressive apps are designed to load quickly, even over slow networks, sends relevant push notifications and load as a top level full screen experience.

MountainTop OrderIT progressive apps works on any browser of choice because it is built with progressive enhancement as the core tenet. It is responsive as it will fit any form factor – desktop, mobile, tablet or whatever that will come in the future. The developed application will feel like a “native” app because the app shell separates the application functionality from its content. The application is safe as it is served via HTTPS which will prevent snooping. Progressive apps do not require any installation, so it is hassle free. There is no requirement to download the application in an app store. Useful applications can be easily shared via URL.

MountainTop OrderIT is created using Progressive Web design is beneficial to corporates as it is maintenance free when Operating Systems are upgraded. The user experience will ensure high usage and provide stickiness that many corporates are looking for Tools that are used includes HTML, CSS, Javascript and Chrome Development Tools.

Populate Your Customer and Product Catalogue

Customer and product information are obtained online to your back office ERP system using API calls. This includes sales history, credit history, stock availability and product pricing.

Manage Sales Transactions

A quotation or order can be created with a minimal number of key strokes. This can be done directly from the product catalogue or from reviewing past buying trends of a particular customer.

Manage Customer Receivables

Customer payment trends and outstanding receivables are available to your sales force with MountainTop OrderIT. Your sales person can easily follow up with your customers to expedite remittance of monies outstanding.

Real Time Information

Your sales force will have real time information for all stock availability across multiple warehouse and companies. They will be able to keep track of all outstanding deliveries anytime and anywhere.

Real Time Updates

All transactions processed will be updated real time to your back office ERP system via API calls. Management can review all in coming orders from the field, make the necessary approvals before the order is processed for delivery.

MountainTop OrderIT is designed to digitize your sales workforce. The solution is equipped with capabilities to integrate with any ERP solution. All core sales related processes are catered for including:

- a. Quotation entry
- b. Sales order entry
- c. Product catalogue with real time availability check
- d. Price check
- e. Sales History
- f. Receivables
- g. Sales person performance
- h. Geo location tracking
- i. Push notifications

Operating systems supported by the solution includes Android and IOS.
